A clearer path to care across Altru

Prepared by Specbee for Altru | Executive brief | October 23, 2026

As Altru adds facilities in a distant region, visitors need to find the right provider, understand which care is offered locally and recognize familiar clinics. They should be able to do that within one Altru experience.

Recommended UX direction

One provider search	Use one bar for a provider name, specialty or clinic, plus an optional city/ZIP selector. Labeled suggestions replace search-mode tabs. Prioritize matching names and preserve a clear path across communities.
Shared services, local detail	Explain a service once. Show verified local offerings, including onsite or visiting care, and connect each offering to the relevant providers. Use dedicated local pages when they add useful detail.
Useful location pages	Keep a separate clinic finder for familiar places. Connect each location to practical details, services and its provider team, with maps and Google Maps directions where appropriate.
A consistent journey	Keep the starting location changeable across search, services and provider profiles. Make farther matching care discoverable. Preserve Altru's theme; appointment scheduling continues in MyChart.

Expected value

This approach is designed to reduce extra search choices, repeated clinical content and confusion about where care is delivered. The guide illustrates related structures at Northwestern Medicine, UCHealth and Mayo Clinic Health System. Visitor testing must establish the actual benefit.

What Altru needs to confirm

Confirm the provider and facility inventory, approved names and aliases, local care capabilities, provider relationships and content owners. Then configure and test TruSearch against that verified content and validate the journeys with representative visitors.

The clickable mockup uses sample search logic. Incoming-region names, care relationships and distances remain anonymous or illustrative. Production integrations, clinical validation, scope and timing require separate confirmation.
